

Equations Sheet

Electricity:

$$F_{\text{Electric}} = k \frac{q_1 q_2}{d^2}, \text{ where } q \text{ is charge}$$

$$1 \text{ volt} = 1 \frac{\text{Joule}}{\text{Coulomb}}$$

$$\text{Current} = \frac{\text{Voltage}}{\text{Resistance}}, \quad I = \frac{V}{R}$$

$$1 \text{ ampere} = 1 \frac{\text{volt}}{\text{ohm}}$$

$$\text{Power} = \text{Voltage} \times \text{Current} = VI$$

$$1 \text{ watt} = 1 \text{ ampere} \times 1 \text{ volt} = 1 \frac{\text{Joule}}{\text{s}}$$

Electromagnetic Induction:

$$\text{Induced } V \propto \text{Number of loops} \times \text{Area of loops} \times \frac{\Delta B}{\Delta t}$$

$$\frac{\text{Primary Voltage}}{\text{Secondary Voltage}} = \frac{N_{\text{loops Primary}}}{N_{\text{loops Secondary}}}$$

$$(\text{Voltage} \times \text{Current})_{\text{primary}} = (\text{Voltage} \times \text{Current})_{\text{secondary}}$$

Electromagnetic Waves:

$$\text{Frequency} = \frac{c}{\text{Wavelength}}, \quad f = \frac{c}{\lambda}$$

$$c = 3 \times 10^8 \text{ m/s (speed of light)}$$

$$\lambda = \text{Wavelength}$$

$$1 \text{ nm} = 10^{-9} \text{ meters}$$

$$1 \text{ Hz} = \frac{1}{\text{second}}$$

Light Quanta (Photons):

$$E_{\text{energy}} = hf = h \frac{c}{\lambda}$$

$$h = \text{Planck's Constant} = 4.14 \times 10^{-15} \text{ eV} \cdot \text{s}$$

Matter Waves:

$$\text{Wavelength} = \frac{h}{\text{Momentum}} = \frac{h}{mv}$$

$$h = \text{Planck's Constant} = 6.63 \times 10^{-34} \text{ J} \cdot \text{s}$$

$$1 \text{ Joule} = 1 \frac{\text{kg} \cdot \text{m}^2}{\text{s}^2}$$
